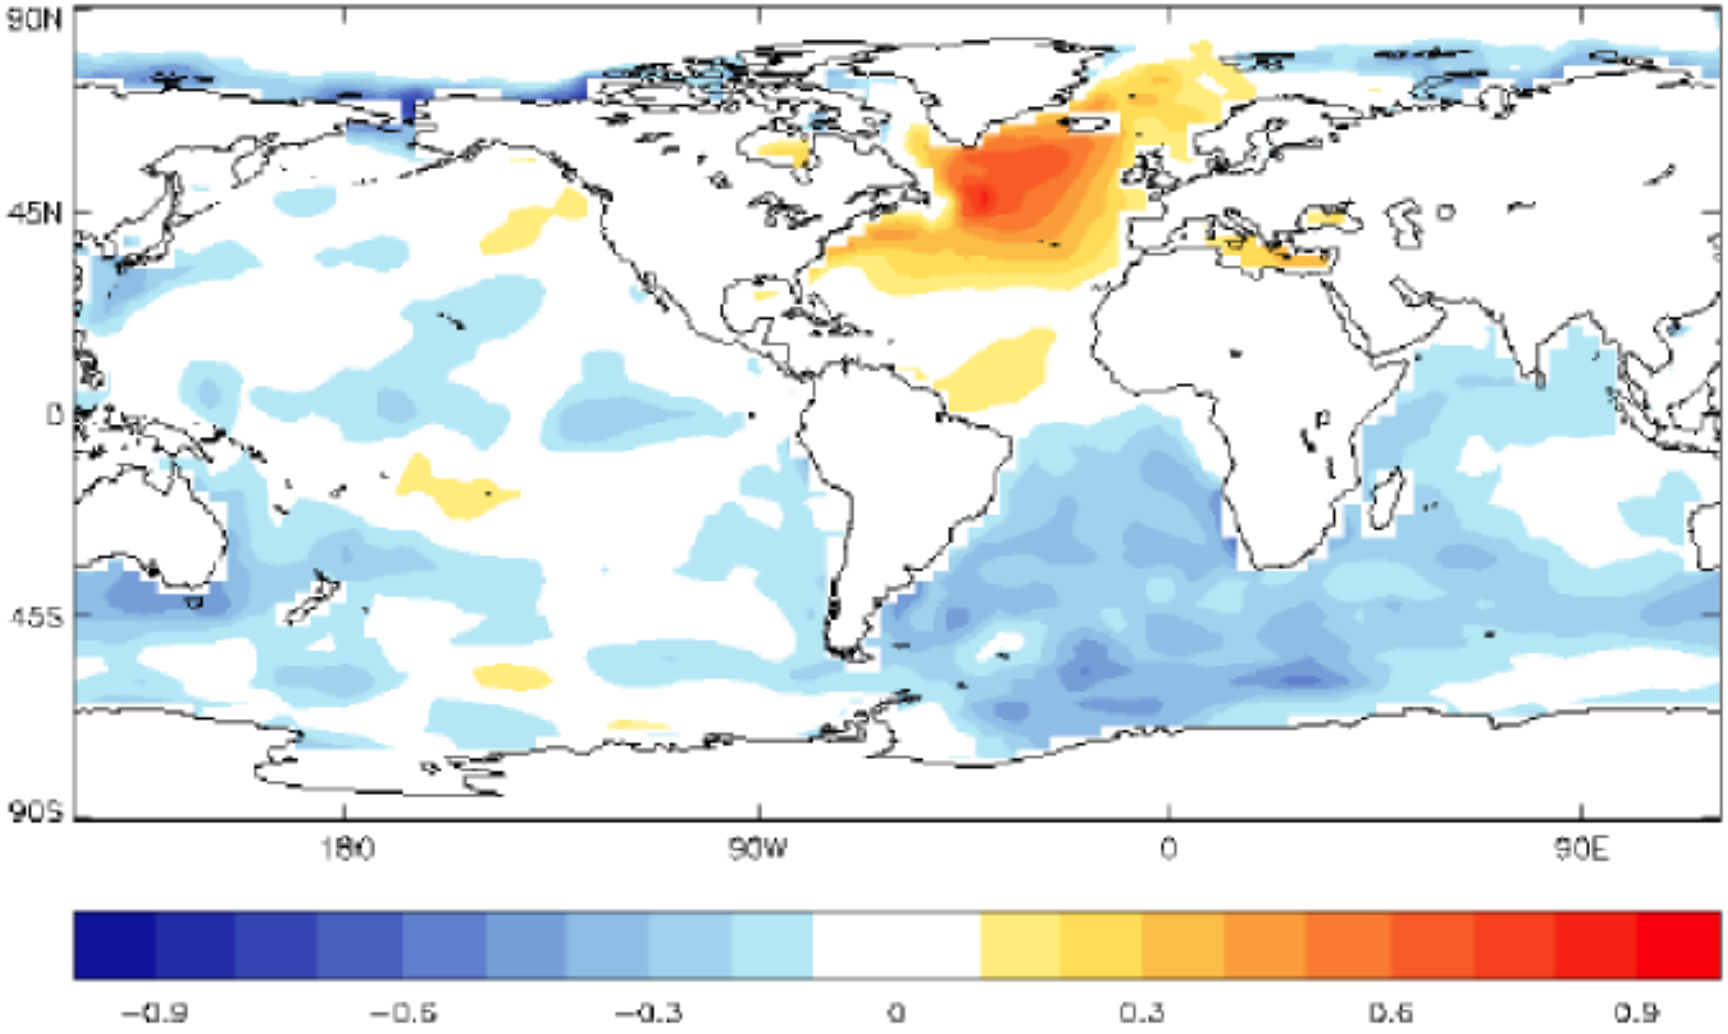
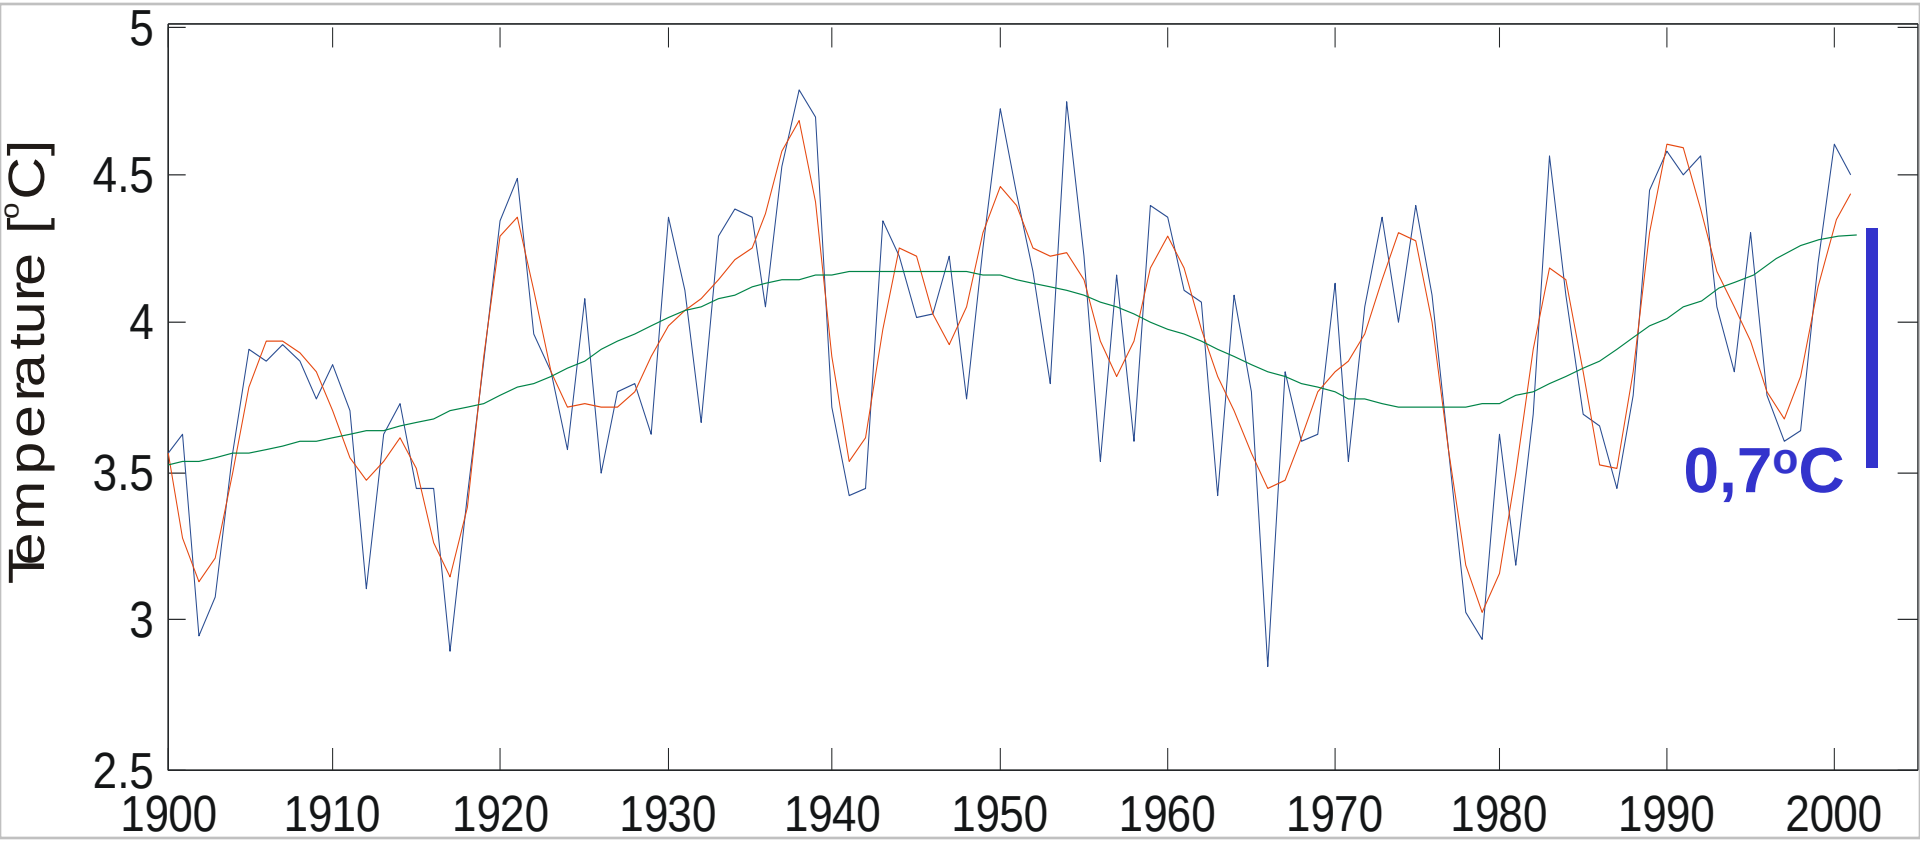
Warming was concentrated in the Northern North Atlantic

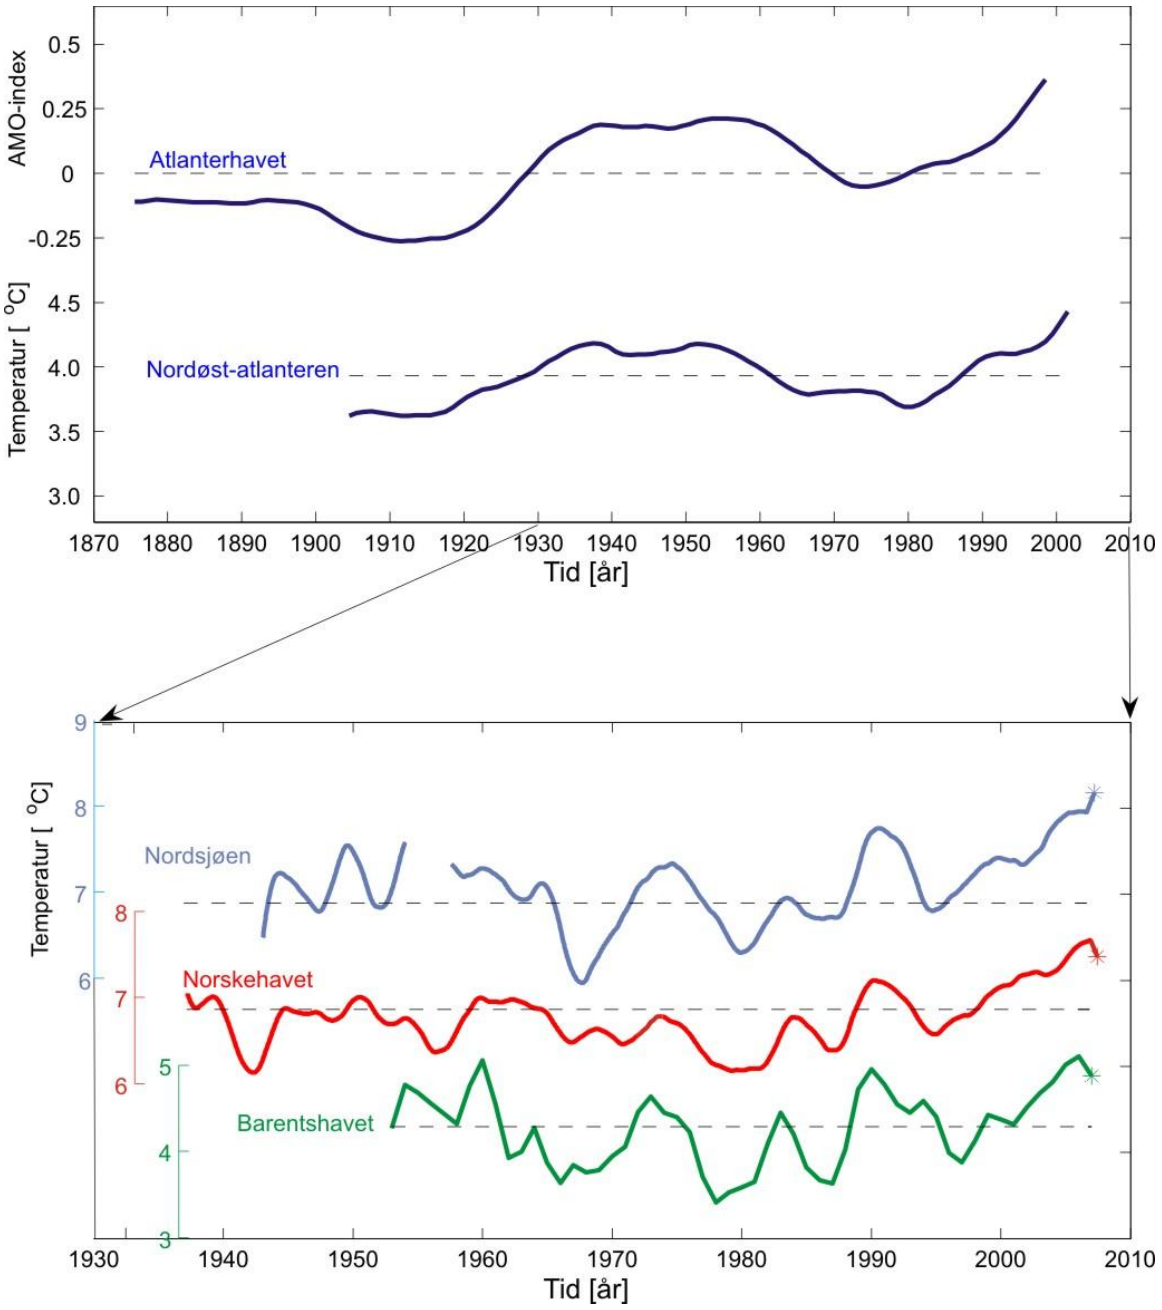


Sea Surface Temperature Change (1930-60 vs 1961-90)

Bjerknes Centre
for Climate Research

Havklimaet i Barentshavet





From basin-scale to regional-scale climate trends

Is the summit of the multidecadal climate oscillation just passed?

Conclusion

• Natural climate periods influencing marine ecosystems occur from interannual to centennial time scales

• Decadal-scale and multidecadal scale periods are particularly dominant in the northern North Atlantic

• The recent warming of the northern hemisphere since 1960s has uncorrectly been ascribed human-induced global warming

* Climate variability and climate change in the past centuries

* **Climate projections for 21. century**

* North Atlantic marine ecosystems response to climate variability and its cascading effects on fisheries

* Climate effects on aquaculture

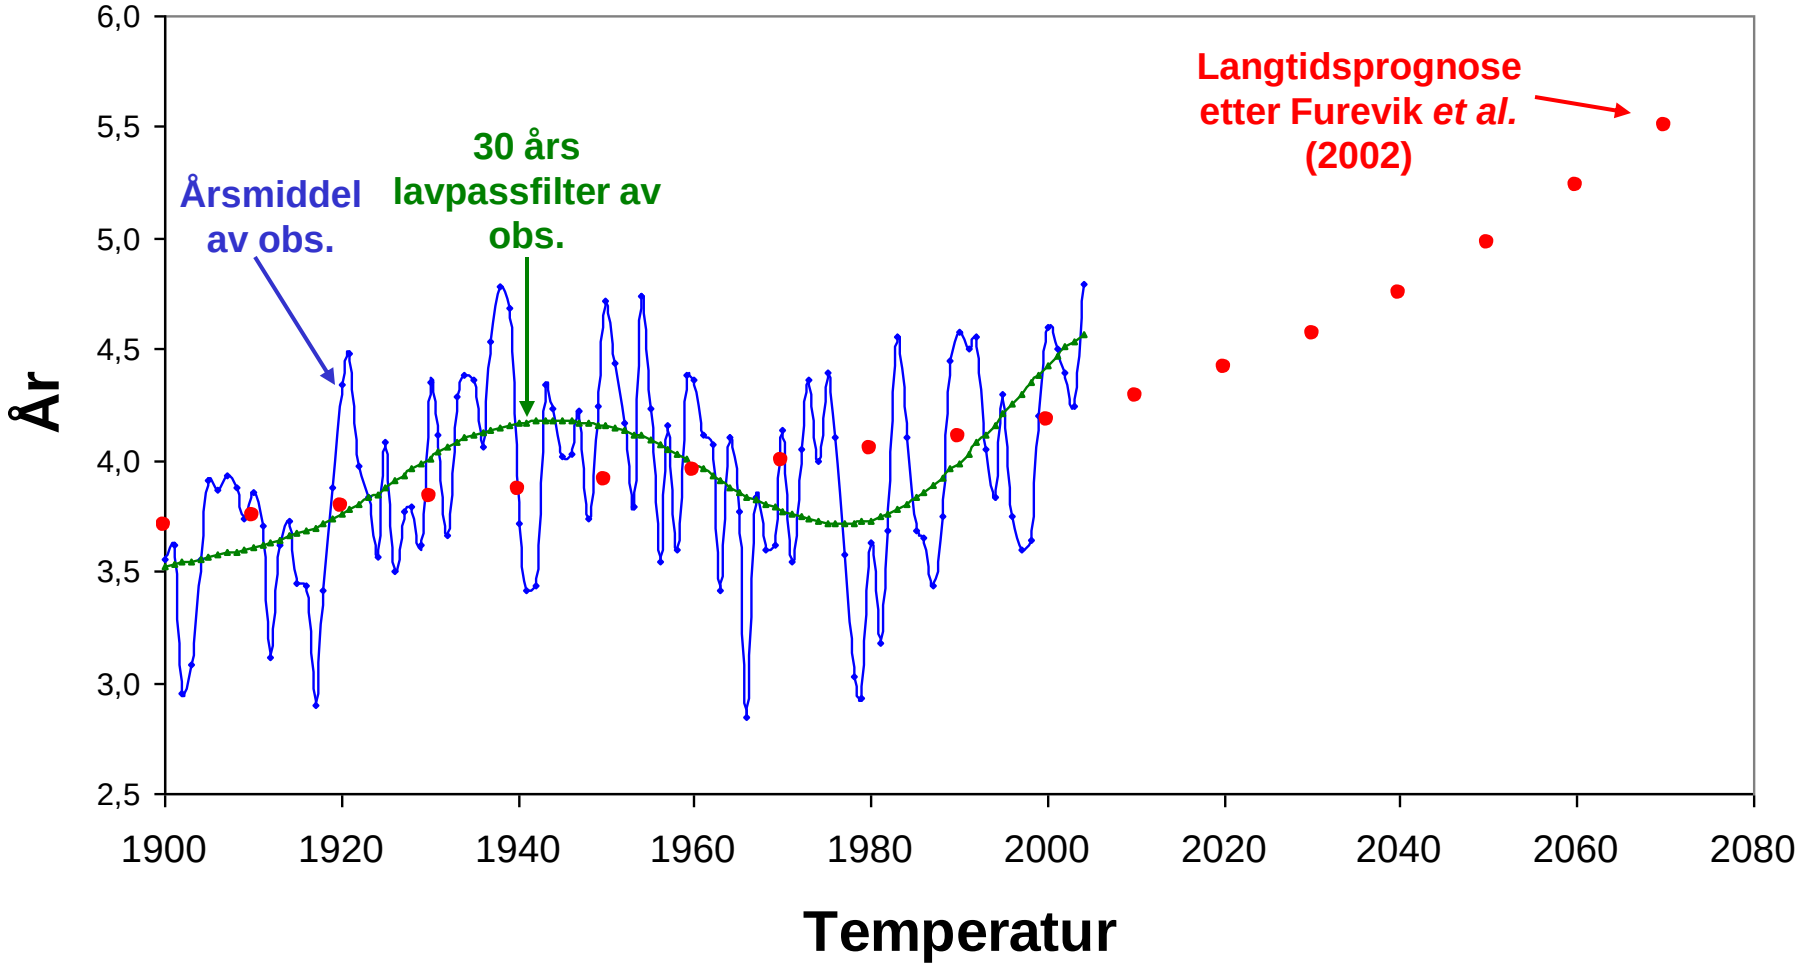
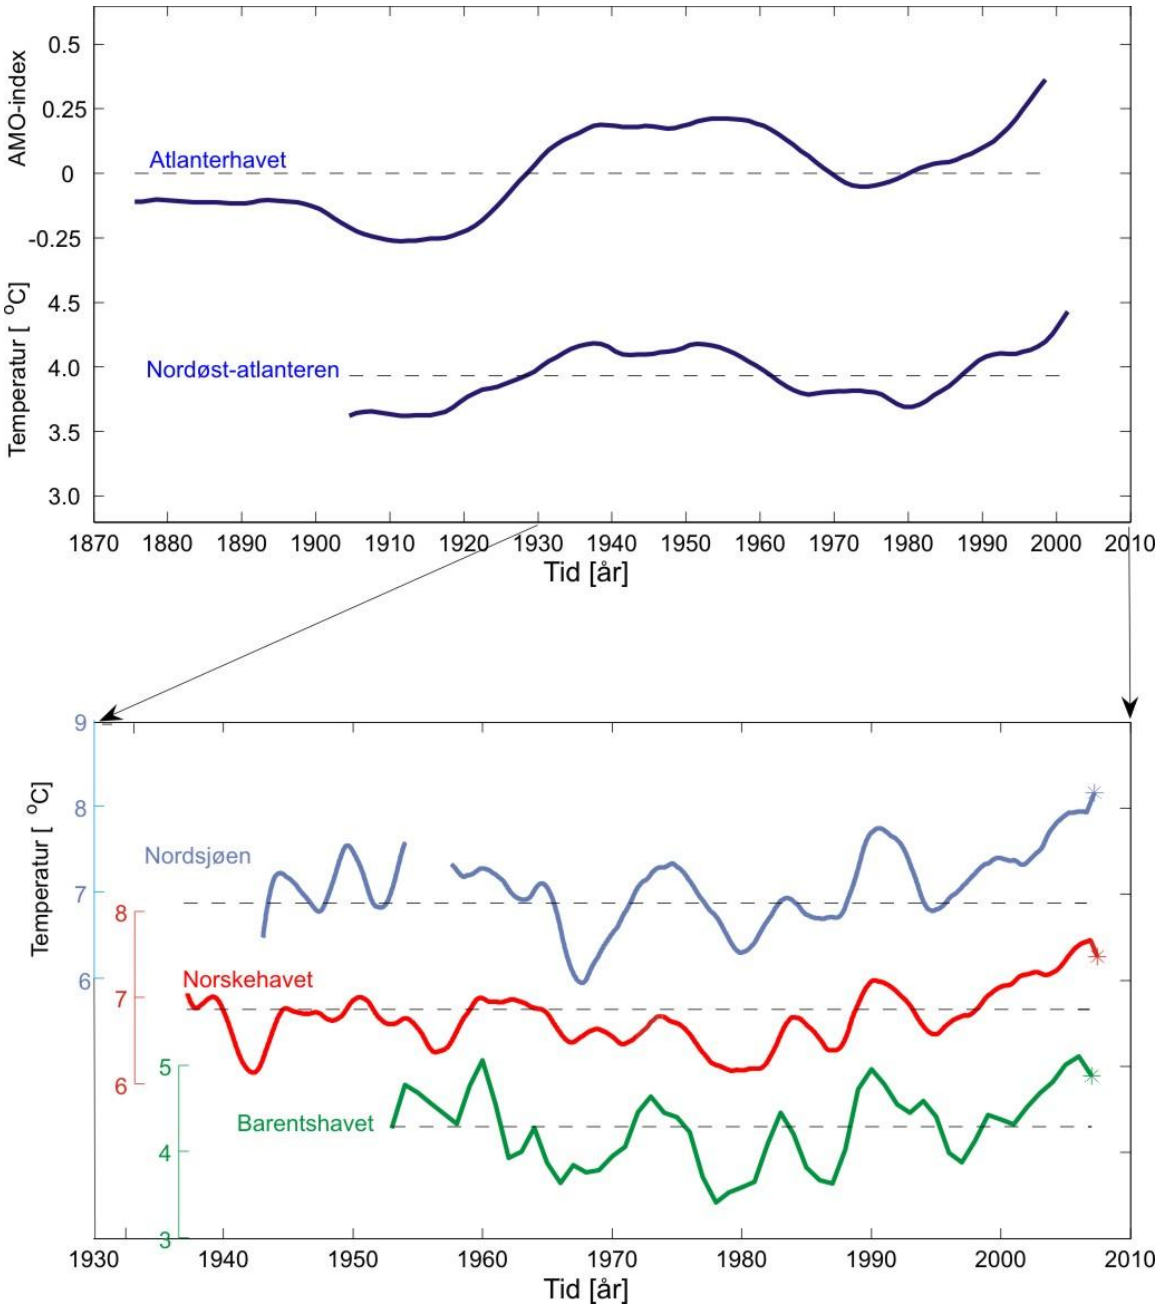
Sjøtemperaturen i det østlige Barentshavet (Kolasnittet) – observasjoner i det 20.århundret og langtidsprognose fram mot 2080



Sundby (2007)



From basin-scale to regional-scale climate trends

Is the summit of the multidecadal climate oscillation just passed?

Conclusion

- Human-induced global warming during 20. century has been small compared to the projected changes during 21. century

- If the natural multidecdal climate signal continues as during the 20.century we might experience a considerable reduction in the warming of the northern hemisphere, or even a moderate cooling over the coming 20 years followed by a very large warming towards the mid 21. century

- Natural climate variability will be small compared to the human-induced climate signal in the second half of 21. century

* Climate variability and climate change in the past centuries

* Climate projections for 21. century

* **North Atlantic marine ecosystems response to climate variability and its cascading effects on fisheries**

* Climate effects on aquaculture

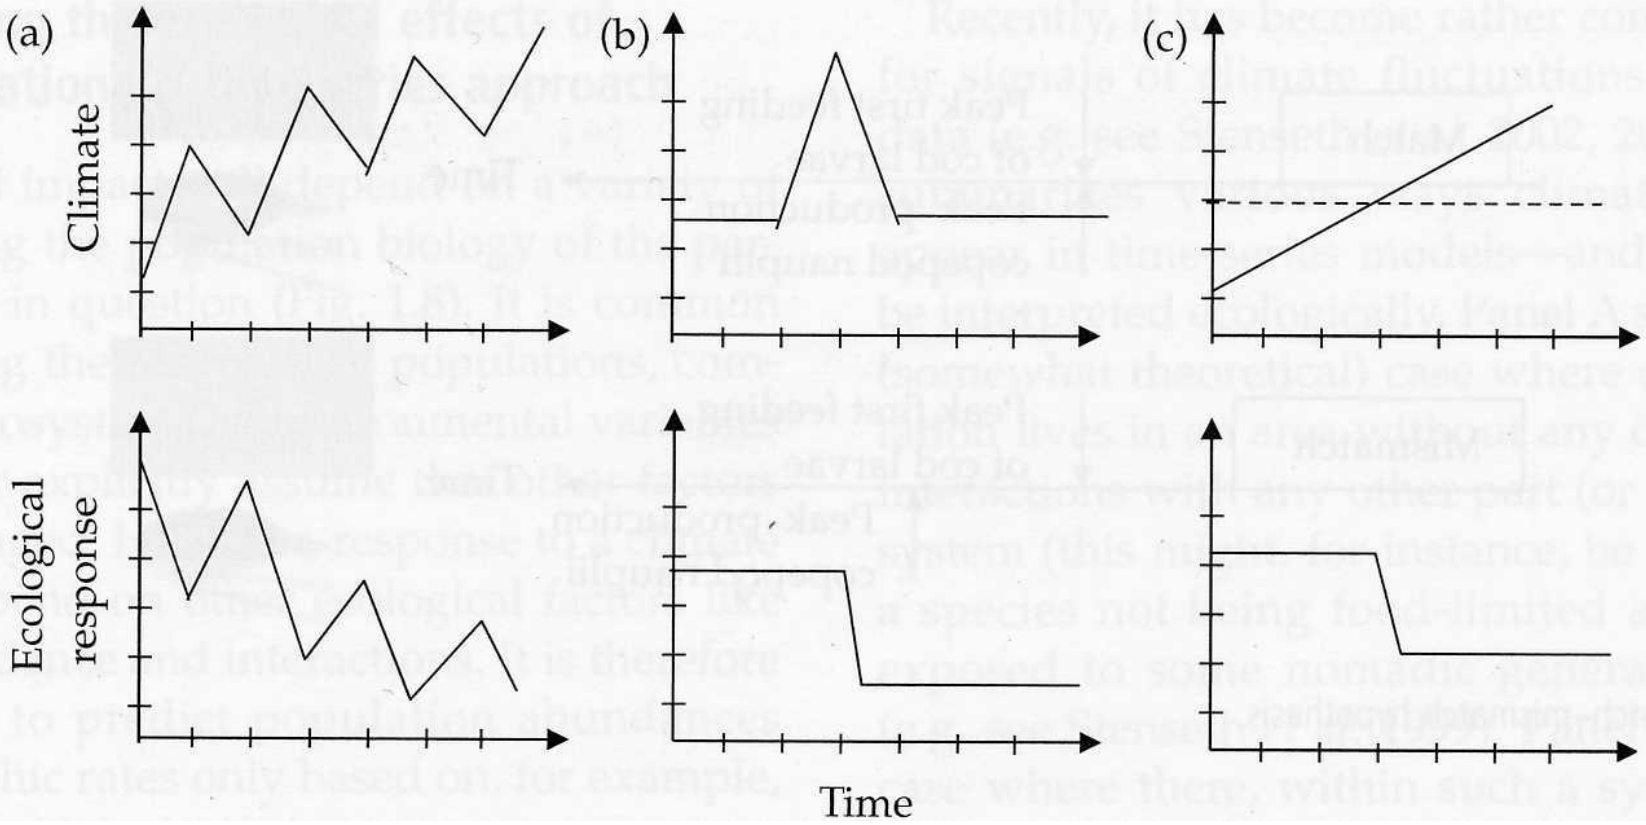
Ecosystem responses to climate change



Linear response | Non-linear respons 1 | Non-linear respons 2

Ottersen et al. (2004)

Conclusions

There are large variability in trophic transfer rates from the primary producers to fish in the various marine ecosystems and at various time periods

- This is because of different trophic structures among marine ecosystems and because of the influence of climate variability
- There are strong couplings between zooplankton, particularly copepods, production and fish production
- Hence, assessment of zooplankton should be an integral part of ecosystem-based fisheries assessment
- The long-term climate periodicity is strongly influencing the abundances of the key zooplankton

* Climate variability and climate change in the past centuries

* Climate projections for 21. century

* North Atlantic marine ecosystems response to climate variability and its cascading effects on fisheries

* **Climate effects on aquaculture**

Veksten til lus er styrt av temperaturen i sjøen

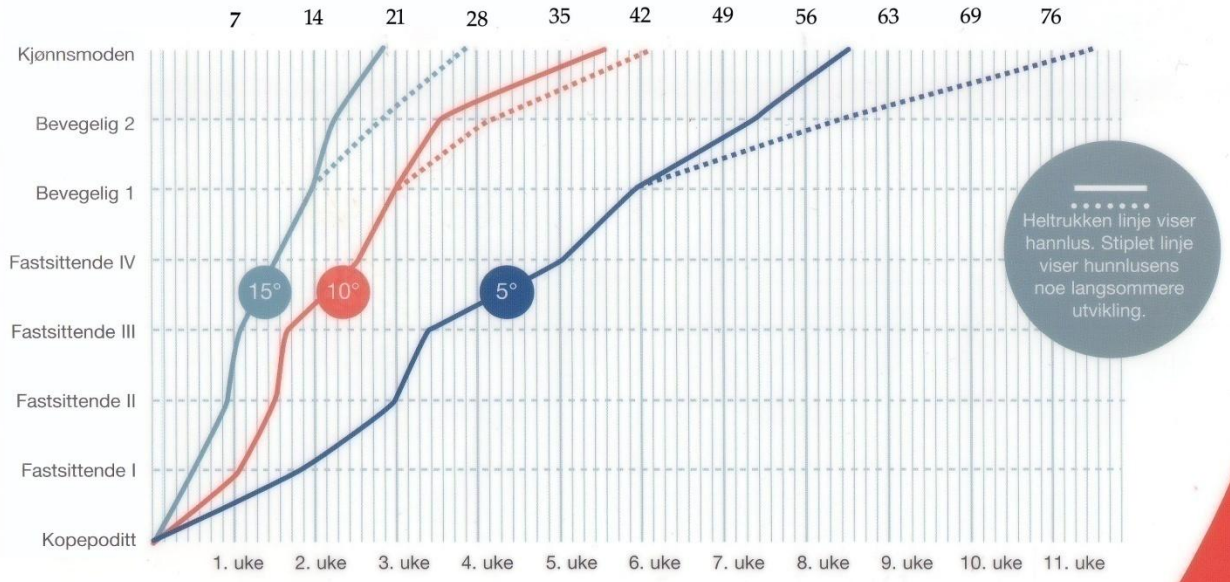
LAKSELUS

- Tre bevegelige stadier på fisken
- Mørk brun farge
- Ingen sugeskål
- Kjønnsmoden hunn 8-12 mm
- Hunnlus større enn hannlus
- Oval form, bakparten mindre enn 50% av full lengde
- Laksefisk som eneste vertsorganisme

SKOTTELUS

- Ett bevegelig stadium på fisken
- Lys brun farge
- To sugeskåler
- Kjønnsmoden hunn 5-6 mm
- Liten størrelsesforskjell mellom hunn- og hannlus
- Avlang form, bakparten ca. 50% av lengden
- Finnes på flere fiskeslag (laks, torsk, sei, sild)
- Har tre dager kortere livssyklus ved 10° C enn lakselusa

ANSLAGSVIS UTVIKLINGSHASTIGHET FOR LAKSELUS VED 5°, 10° OG 15° C



SKRETTING

Dette er en bakteriesykdom som kan gi økte problemer ved økt temperatur

Conclusion

- New types of diseases are appearing on farmed fish as temperature increases

- Along the Norwegian coast the optimal region for salmon farming has been along the west coast from Hordaland to Møre because of the highest winter temperatures and the moderatly high summer temperature.

- Under future climate change the optimal region for salmon farming will be displaced northwards along the coast towards Nordland because of too high summer temperatures along the Hordaland-Møre coast.
